

## Huxley Communications Cooperative Demonstrated Experience – NOFA #003

Huxley Communications Cooperative (HCC) was one of the first companies in the state to provide Fiber to the Home technology and has been on the leading edge of the fiber broadband industry ever since. HCC started providing FTTH to customers in 2001 in the communities of Slater and Cambridge with the fiber newest technology available. Since then we have upgraded our plant infrastructure and equipment multiple times to continue to provide quality broadband services to our customers over fiber. In 2005 HCC expanded our fiber network by offering services over fiber to White Oak and Elkhart. In 2018 HCC extended services over fiber into Alleman and Luther. Fiber broadband services were available to residents in Sheldahl in 2019 and in 2020 HCC began the overbuild into Madrid. We currently serve over two thousand nine hundred customers with state-of-the-art fiber broadband services.

Employees of HCC have attended multiple workshops and seminars over the years to ensure we have the most up to date information on our equipment and services we provide. HCC is considered one of the leaders in fiber technology in the state. HCC Operations employees have over one hundred thirty-five (135) combined years of fiber broadband experience.

HCC fiber broadband customers include four (4) schools, multiple city facilities, five (5) banks, over one hundred and eighty-five businesses (185) and over two thousand six hundred (2600) residential customers in ten communities and three counties. All customers are served with Fiber to the Home technologies.
