

The Killduff 2020 FTTH project, if awarded, will complete additional fiber to the home service to each customer in the Killduff service and surrounding area. We are requesting grant money for this project to help with the costs involved in installing the fiber optic plant necessary to provide broadband service to these subscribers. This construction will meet the requirements in NOFA #003. With this Grant we will be able to offer 100/100 broadband service to subscribers still on copper service lines. We have been in contact with a local contractor and we can have materials available to start upon award and authorization to proceed. We can have all work completed as required in the NOFA #003. None of the proposed construction applied for in this application has begun and has not been applied for with any other government agency. Killduff Telephone Company has reviewed the terms, conditions and requirements of the NOFA-003. We understand these terms, conditions and requirements. Killduff Telephone Company is able to comply with each of these as defined.
