Executive Summary

Router12 Networks plans to expand its 100/20 Mbps service offering to the town of Aredale and surrounding areas. Our primary deployment method is fixed wireless. We are currently seeking funding to assist in a rapid deployment of the equipment required to serve premises with 100/20 Mbps. This project is unlikely to move forward without funding. We are aware that there are a substantial number of homes in this area lacking enough broadband service to work from home, video conference, or take online schooling. Currently this expansion project is in the pre-planning stages.
