<p>Our company has been providing communications service in rural Iowa since 1905. Prior to constructing fiber networks, our company provided service to our communities over copper networks. We continue to evaluate areas near our existing service footprint for potential expansion of our fiber network into rural edge out areas and other neighboring communities. Our company has also constructed extensive fiber transport networks connecting our serving areas to each other, to other neighboring company's serving areas and to our middle mile transport provider(s). We now operate FTTP networks in the communities of Denison and Treynor through the acquisitions of two neighboring companies.</p>
