

To whom it may concern,

We are located between Washington & Kalona, just one mile off Highway 1. We started with the old dial-up internet and have seen great improvements with speed. However, it seems we still can't quite get as fast of internet as they do in town. We have three children and when all 3 were in high school at the same time, they really complained on how slow our internet is. In fact, there were times when they were not able to upload their homework until they got to school the next day because it was taking so long.

We also farm and are continuing to use the internet for day-to-day business practices. Whether it means trying to bid on equipment through online auctions or uploading documents to our banker, we rely on the internet all the time. We even have an iPad application to feed our cattle and use a hot spot to connect.

And obviously in an ever-changing world, we are using the internet in our personal lives for Netflix & Hulu streaming and all kinds of social media outlets.

We are lucky to live in a community with a strong cooperative technology company. Many of our neighbors have been fortunate to have KCTC as a provider of fiber optic internet for years. We have heard great things about the company and the quality of their services. We would love to be a part of their high-speed service!
