

LTD Broadband was founded in 2011 and is the 4th largest wireless internet service provider geographically in the United States. Our success has largely depended on serving rural and under-served areas, including much of Iowa. We've always been interested in investing and deploying reliable broadband where nobody else was willing to go.

In 2020-2021 it's never been more critical that we grow and expand as fast as we possibly can. With so many people trying to work from home and distance learn our goal has been to reach as many under-served individuals as possible. In March we self funded a program for families that qualify for free and reduced lunches who didn't currently have home internet to receive free internet for two months so students could continue to distance learn.

Currently we have over 200 fixed wireless tower sites in Iowa. Most of our tower sites are on grain legs, silos and we have been fortunate to work with many local city councils to obtain access to city water towers to provide fixed wireless to communities. In return we often provide services for local communities such as city centers, fire halls, libraries, etc. for allowing us to put our equipment on the water tower.

With access to grants and more funding opportunities we could expand coverage to many more desperate areas at an exponentially faster rate that we currently can.
