

Huxley Communications Cooperative Executive Project Summary – NOFA #005

Huxley Communications Cooperative (HCC) proposes to use the grant funds to provide phone, long distance, high speed internet and video over internet protocol via buried Fiber to the Home technology. Using Fiber technologies, Huxley Communications will be able to provide the fastest speeds possible as we are NTCA Gig Certified. This project would extend where construction ended from NOFA#3 grant award, constructing underground fiber optic cable from Shipley IA, to Maxwell IA. See map below.

This project will allow us to provide service to approx 82 homes with 45 of them located in TSA blocks. There are very few adjoining TSAs in this project, therefore some cost are included to connect the TSAs.

HCC has followed the terms, conditions and requirements of Iowa Administrative Code Rule 129-22 and Iowa Code Sec 8B.11 during the completion of the grant application process.
