

Demonstrated Experience

Wyoming Mutual Telephone Company (Wyoming Telephone) has been in business since 1913 and has supplied its customers with quality telecommunication services ever since. Wyoming Telephone provided dial tone to our community and then upgraded to ADSL to ensure customers receive the technology and speed they need to succeed. Although a small rural company with budget constraints, the company has been able to upgrade equipment as needed. Fiber technology was deployed in our serving area in 2015. Federal funding via ACAM support has helped us push forward in these areas. Wyoming Telephone is seeking assistance with this grant for areas that are on the outskirts of our serving territory for customers that need it the most because they are rural and without a service provider who has built a high-speed network.

Wyoming Telephone has a proven reputation of deploying broadband services and is led by experienced key staff that can manage their established organization to successfully implement and operate the proposed broadband infrastructure. Wyoming Telephone has initiated the Emergency Broadband Benefit (EBB) Program to assist low-income households in affording high-speed broadband. This program will be offered to all households in this service area.

Wyoming Telephone is a certified Eligible Telecommunications Carrier (ETC) in the State of Iowa and is in good standing. Wyoming Telephone has a strong financial background and sustainability, being in business for over 108 years. We are skilled in deploying fiber networks and working with local schools, hospitals and businesses. These relationships are what we depend on just as much as these customers depend on us. We have the know-how and the desire to keep Iowa connected.
